

APPLICATION SUITE

A2NGO AIS RELAY

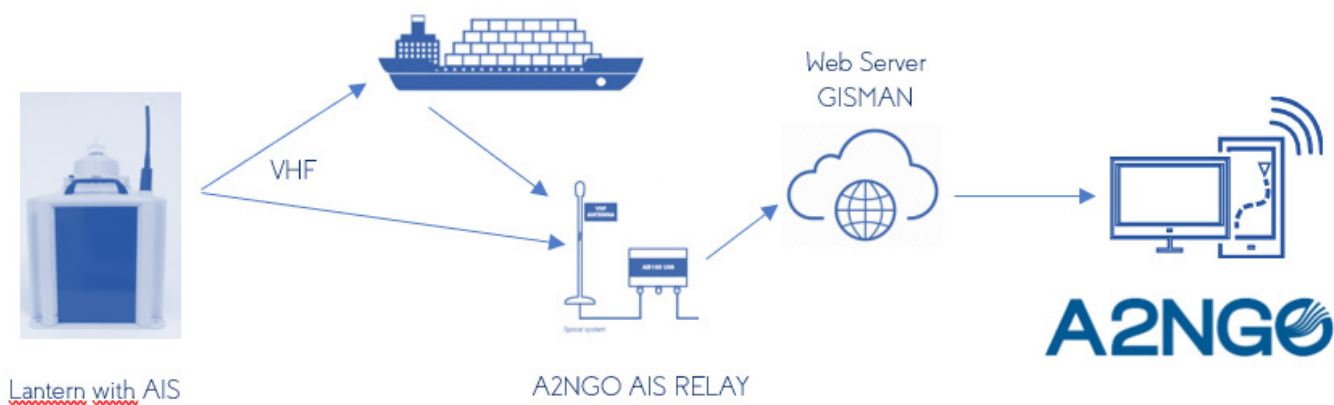

Keep in control!

- Take advantage of A2NGO solutions to control in real time and manage at lower cost your beaconing system
- A2NGO is designed for managers and operators of AtoN
- Improve the availability of your assets

A2NGO AIS RELAY - How does it work ?

- Station made of a PC server with an AIS transmitter receiver and a VHF antenna
- Locally installed at customer premises and connected to Internet via a network connexion (wiring or by Wifi)
- Gather messages received by vessels and AIS Transponders of AtoN (Msg 21 & 6) under VHF coverage
- Convert received messages and broadcast them to the GISMAN A2NGO servers
- Thanks to the A2NGO AIS RELAY, together with the Record & Replay function of the A2NGO Supervision application, the user can monitor and watch-out the possible collisions between vessels and AtoN
